Designing an ID Badging Solution

In order to determine the best desktop ID Card Solution, consider your future needs as well as cost.

The basic fundamentals of an ID Badging Solution primarily consist of three components - printer, software and digital camera. This provides the ability to identify users and privileges, while automating processes within your organization.

To ensure your ID Badging Solution will grow with your organizational needs, it is important to ask the following questions: [read the rest of the article >>>>](#)

Affordable ID Badging Software for Every Budget

Need to increase your ID badging software functionality? Is your new operating system not compatible? Instead of putting a band-aid on your badging software, why not upgrade now?

All software purchases from IDentiphoto come with a 60 day warranty and we continue to provide FREE email technical support on any software purchase even after the manufacturer's warranty expiration.

Explore our complete line of [ID badging](#), [tracking](#) and [visitor management](#) software. Not sure which software will best meet your needs? [Chat](#) now or contact us at 1-800-860-9111 to speak with an ID Expert.

We offer support on ID Flow, EPI Suite, Asure ID, Lobby Track and more.

The new Zebra ZXP Series 7 Card printer. See more. Do more.

Utilizing the latest in card printing technology, the ZXP Series 7 direct-to-card printer provides fast and reliable photo-like cards for high-volume applications.

Recently added to the Zebra Technologies Corporation portfolio of cards printers, this unit has replaced the P330i and P430i performance class printers and the P630i and P640i security class printers.

The [ZXP Series 7](#) offers many advantages over the performance and security class line such as:

- Better operational efficiency due to high throughput
- Fewer media loadings per job, as the printer holds more cards and ribbons
- Easier ribbon loading
- Lower cost per card
- Better image quality with photo-like color images
- Adaptable design enabling option upgrades, including the laminator
- Ethernet is standard

The innovative design automatically adjusts to the thickness of the card and a clear LCD control panel allows for intuitive program operation. The ZXP Series 7 is available with numerous encoding and connectivity options, and if extra security or durability is necessary, wasteless lamination is available in either single or dual-sided.
