Spring Cleaning Tips

Spring cleaning is not just for your home anymore but applies to your ID Badging System as well.

Now is the perfect time to review your ID Badging System in its entirety, including your software and hardware. Ensure that your system is working properly and without any glitches following the tips below.

ID Badging System Spring Cleaning Tips

1. Purge your database of any employees/members no longer with your organization.
2. Make sure all records are complete and are not missing any pertinent information such as photo, employee number etc.
3. Remove duplicate records.
4. Give your printer a thorough cleaning to ensure good quality prints. Be sure to use cleaning supplies designated for your printer model.
5. Make sure you are running the latest firmware and download the most current driver for your printer and scanners.
6. Check your supply inventory to make sure you are not running low on your card stock, ribbons and accessories.
7. Consider re-designing your ID Badge to include helpful information such as call-off procedures, important phone numbers etc.

Properly maintaining your software and equipment frequently will help minimize issues in the future. Need help? Chat Live now or contact us at 1-800-860-9111.

The future is Now!

Identity is more secure & going mobile

Introducing: Secure Identity Object (SIO)

HID Global's next-generation access control card-and-reader platform provides a generational step function in security, usability and performance, and environmental sustainability. The platform introduces a new portable credential methodology based on a standards-based, technology-independent and highly flexible SIO identity data structure.

Secure Identity Object (SIO) is a data model for storing and transporting identity information in a single object from HID.

SIO's consist of a number of independent but associated data objects for such items as physical access control, finger print templates and cash on card. SIOs can be deployed on a variety of devices. Including contactless and contact smart cards, smart phones and USB tokens and used across technology platforms including 13.56 MHZ.

Imagine...

SIOs are designed such that they can be used in environments with multiple devices and varying security requirements. Portability is achieved because the same SIO stored on one device can be easily moved to and used on other devices as required.

SIOs are defined using open industry standards that provide infinitely flexible object definition. This definition can support any piece of data, including access control, biometrics, vending, time-and-attendance, and many other applications. Unlike the traditional fixed-field structures used in today's access control card and reader systems, the SIO and associated interpreters are designed to support future identity technology advancements and security requirements.

Successfully implemented in the higher education market place, read more about here.

Tell us! What printer do you use?

There are several major manufacturers of direct-to-card printers on the market.

Please share with us what brand of printer you are currently utilizing by voting now.

We value your feedback!

Attachment Corner
